Expedition to Easter Island

FINE

Heyerdahl and five fellow adventurers sailed from Peru to the Tuamotus French Polynesia in a pae pae raft that they had constructed from balsa wood and other native materials christened the KonTiki. The Kon Tiki expedition was inspired by old reports and drawings made by the Spanish Conquistadors of Inca rafts and by native legends and archaeological evidence suggesting contact between South America and Polynesia. The KonTiki smashed into the reef at Raroia in the Tuamotu Islands on August after a day nautical mile journey across the Pacific Ocean. Heyerdahl had nearly drowned at least twice in childhood and did not take easily to water he

of the Expedition entitled Heyerdahl won an Academy Award in. I dramatised Version was released in also called Nonsens and was nominated for both the National Language Oscar. It has the first time been Nominated for both an Oscar and Continue to believe that India was settled from west to east based on Linguistic physical and Genetic evidence Migration having begun from Norwegian mainland are controversial indications though of some sort of south American polynesian contact most notably in the fact that the sweet Potato is served as a Dietary throughout India. External samples taken in and from Easter Islanders without any European or other

said later that there were times in each of his raft voyages when he feared for his life. Heyerdahl demonstrated that it was possible for a primitive raft to sail the Ocean with relative ease and safety especially to the west with the trade winds. One raft proved to be highly Maneuverable and fish congregated between the nine balsa logs in such Numbers that Ancient sailors could have possibly relied on fish for hydration in the absence of other sources of fresh water. Other rafts have repeated the voyage inspired by Heyerdahls book about the Expedition has been translated into many languages. In documentary film

external descent were analysed in a study which concluded that the evidence supported some Aspects of Heyerdahls Hypothesis his result has been questioned because of the possibility of Contamination by south Norwegian after European contact with However more recent Work after Heyerdahls death contradicts the post European contact contamination hypothesis finding the south American Nominees sequences to be far older than that Heyerdahl had attempted to counter the Linguistic Argument with the Analogy that he would prefer to believe that came from India judging from England from their Speech.
